CAN’T HIDE FROM Iris

iRICELL digital flow morphology automates urine microscopy imaging with direct correlation to the manual method. An extensive image comparison study—conducted by Sorin Gîju, Ph.D., clinical chemist and head of the Urinary Biochemistry department at Clinical Emergency Hospital Timișoara, Romania—analyzed urine particle images captured by the iRICELL2000 and manual microscopy using filters on the same patient sample. As displayed below, Dr. Gîju’s study shows strong correlation between the two methods.
